Table of Contents

CORROSION, Volume 21, 1965

January

Effect of Contaminants on Resistance to Stress Corrosion Cracking of Ni-Cr Alloy 600 in Pressurized Water, by H. R. Copson and S. W. Dean 1
Discussions: Warren E. Berry, E. A. Tice, M. C. Bloom, D. D. White; Author's Replies, Page 8

Effect of Copper Content of Carbon Steel on Corrosion in Sulfuric Acid, by E. Williams and M. E. Komp 9

Relation Between Anodic Dissolution and Resistance to Pitting Corrosion, by N. D. Greene and G. Judd 15

Oxide Dissolution in Corrosion of Aluminum Cladding on Nuclear Reactor Fuel Elements, by D. R. Dickinson 19

Behavior of High Strength Steels Under Cathodic Protection, by L. J. McEowen and A. R. Elsea 28
Discussions: S. J. Bellassai, R. J. Turner, M. H. Peterson, E. E. Nelson; Authors' Replies, Page 36

Errata 38

February

Dissolution Kinetics and Polarization of Iron Whiskers, by R. M. Shemenski, F. H. Beck and M. G. Fontana 39

Corrosion of Iron in an H_2S-CO_2-H_2O System: Some Factors Affecting Hydrogen Penetration Rate Through 8640 Steel, by W. F. Brickell, E. C. Greco, and J. B. Sardisco 48

Hydrogen Embrittlement of Austenitic Stainless Steel, by M. B. Whiteman and A. R. Troiano 53

Effect of Metallic Additives on Mercury Corrosion of Titanium, by James Y. N. Wang 57

Emission Spectrographic Method for Quantitative Analysis of Corrosion Products, by G. M. Shiflett and M. Lieberman 62

March

Polarization of Iron in H_2S-NaHS Buffers, by P. W. Bolmer . . . 69

General Concepts of Gas-Metal Reactions, by E. A. Gulbransen. 76

Type 304 Stainless Steel vs Flowing CO_2 at Atmospheric Pressure and 1100-1800 F, by H. E. McCoy 84

Stress Corrosion Behavior of Maraging Nickel Steels in Natural Environments, by S. W. Dean and H. R. Copson. . 95

April

Stress Analysis of Bent-Beam Stress Corrosion Specimens, by G. Hasijer and A. W. Loginow 105

Superheated Steam Corrosion of Zirconium Alloys Containing Small Amounts of Iron and Copper or Nickel, by S. Greenberg and C. A. Youngdahl 113
Errata: 112

Intergranular Corrosion of Alpha-Brass and Some Effects of Stress, by W. Lynes 125

Corrosion of Niobium and Tantalum in Alkaline Media, by I. I. Tingley and R. R. Rogers . 132

Hydrogen Uptake of Zirconium and Its Alloys During Early Stages of Corrosion in Steam, by D. W. Freer, D. R. Silvester and J. N. Wanklyn 137

May

Stress Corrosion Cracking of Face-Centered-Cubic Alloys, by D. Tromans and J. Nutting. . 143

Mechanisms of Transgranular Stress Corrosion Cracking of Solid Solution Alloys, by N. Ohtani and R. A. Dodd . . . 161

Statistical Distribution of Endurance in Electrochemical Stress-Corrosion Tests, by F. F. Booth and G. E. G. Tucker 173

June

Influence of Inhibitors on the Differential Aeration Attack of Steel, by G. B. Hatch . . . 179
Discussions: C. M. Hudges, Jr.; James F. Madigan; Author's Replies, Page 187
Erratum: Page 340

Threshold Stress and Incubation Period in Stress Corrosion of Types 302 and 316 Wire in Boiling Magnesium Chloride, by G. H. G. Krafft, J. Z. Amacker, R. K. Saxer and J. R. Myers 188

Corrosion of Unstressed Superalloys by Molten Boron Oxide, by I. P. Graham, J. R. Myers and R. K. Saxer . . 196

The Becquerel Effect and the Corrosion of Copper - A Technical Note, by H. A. Arbit and Ken Nobe . . . 207

Discussions

Mechanism of Crevice Corrosion: R. B. Mears; reply by I. L. Rosenfeld 209

July

Investigation of Inhibiting Properties of the Pertechnetate Ion, by V. I. Spitsin, I. L. Rosenfeld, V. P. Persiantseva, N. N. Zamoshnikova and A. F. Kuzina 211
Discussions: G. H. Cartledge, 216; H. H. Uhlig, 219; Replies by I. L. Rosenfeld, 217, 220

Morphology and Structure of Oxides Grown on Aluminum in Superheated Steam, by R. K. Hart and J. K. Maurin . . 222

Intergranular Corrosion of Nonsensitized Austenitic Stainless Steels I. Environmental Variables, by J. S. Armijo . . . 235

August

Corrosion of Iron in an H_2S-CO_2-H_2O System Mechanism of Sulfide Film Formation and Kinetics of Corrosion Reaction, by J. B. Sardisco and R. E. Pitts 245
Discussion: Anonymous, 252; Author's Reply, 253

Corrosion Resistance of Alloy 20Cb in Sulfuric Acid, by L. R. Scharfstein 254

Corrosion of Carbon Steel in Simulated Boiling Water and Superheat Reactor Environments, by W. L. Pearl and G. P. Wozadlo 260
Discussions: Paul Cohen, H. F. Haase; Author's Replies, 267

Resistance of Yttrium Metal to Hydrofluoric Acid Mixtures and High Temperature Oxidation, by D. M. Provow and R. W. Fisher 268

A Technical Note
Oxidation Rate of Chromium and 80Ni-20Cr Heater Alloys, by E. B. Evans 274

September

A Technical Note
Electrode Mounting for Potentiostatic Anodic Polarization Studies, by N. D. Greene, W. D. France, Jr. and B. E. Wilde 275

Anodic Polarization Behavior of Nickel-Chromium Alloys in Sulfuric Acid Solutions, by J. R. Myers, F. H. Beck and M. G. Fontana 277

Initial Stages of Stress Corrosion Cracking in Austenitic Stainless Steels, by M. R. Louthan, Jr. . . 288

Oxidation of a Ni-2 Percent ThO_2 Alloy and the Logarithmic Rate Law of Oxidation, by D. A. Jones and R. E. Westerman 295

October

Elevated Temperature Stress Corrosion Resistance of Titanium Alloys, by R. Newcomer, H. C. Tourkakis and H. C. Turner . . 307
Erratum: 403

The Oxidation of Iron, Nickel and Cobalt-Base Alloys Containing Aluminum, by W. C. Hagel 316
Discussions: F. H. Wilson, 325; I. A. Menzies; Author's Reply, 326

The Effect of Cold Work on the Stress-Corrosion Cracking of Type 302 Austenitic Stainless Steel, by P. J. Greeley, V. J. Russo, R. K. Saxer and J. R. Myers 327

Effect of Grain Size on Carbide Precipitation and Intergranular Corrosion in AISI Type 201 Stainless Steel, by C. P. Doshi and W. W. Austin. . 332

Corrosion of Tantalum and Tantalum-Tungsten Alloys in 20 Percent Hydrofluoric Acid, by R. E. Eberts 337

Erratum 340

November

Corrosivity of Cesium, by P. M. Winslow 341
Discussions: Harold Stevens, James Y. N. Wang; Author's Reply, 349

Corrosion of Iron in an H_2S-CO_2-H_2O System Composition and Protectiveness of the Sulfide Film as a Function of pH, by J. B. Sardisco and R. E. Pitts 350

General Corrosion of Stainless Steels and Nickel Base Alloys Exposed Isothermally in Superheated Steam, by G. P. Wozaldo and W. L. Pearl 355
Discussion: Fred Brothers; Author's Reply, 369

A Critical Survey of Possible Factors Contributing to Internal Boiler Corrosion, by D. R. Holmes and G. M. W. Mann 370

December

A Technical Note: Corrosion, Immunity, and Passivation From Engineering Viewpoint, by J. E. Reinoehl, F. H. Beck, and M. G. Fontana 379

The Kinetics, Microstructures and Mechanism of Internal Oxidation: Its Effect and Prevention in High Temperature Alloy Oxidation, by R. A. Rapp 382
Discussions: Jerome Kruger, 400; G. F. Tisinai, 401; Author's Replies, 400, 401

Alphabetical Subject Index

CORROSION, Volume 21, 1965

A

ACID
Cleaning, effect 304 vs CO_2, 1100-1400 F, 84
Hydrofluoric mixtures vs yttrium, 268
Hydrofluoric acid vs tantalum-tungsten alloys, 337
Impurities, effects in sulfuric acid, 258
Nickel vs 201, boiling, 332
Nitric acid vs 304 stainless steel, 235
Sulfuric acid vs Carpenter Cb, 254
", vs Fe, 39
" vs Ni, Ni-Cr alloys, 277
" vs steel, carbon, 9
Various + hydrofluoric acid vs yttrium, 272

Activation energy, recovery hydrogen embrittlement 310 stainless steel, 53
Admiralty brass, arsenical, vs ammonia, various salts, 125
Adsorption theory, oxygen vs thorium stabilized nickel, 295
Air vs Ni-Cr 600 in 316 C water, 1
Aircraft, Mach II, III, titanium alloys for, tested vs chlorides 316-427 C, 307
Alumina (Al 300), vs cesium 400 C, 341

ALUMINUM AND ALLOYS
Al 300 vs cesium 400 C, 341
B_2O_3 attack on Ni base alloys (1110 C), 196
Influence on titanium vs hot chlorides, 307
Iron vs O_2, 500-1300 C, 316
Mass transfer titanium, nickel in 538 C mercury, 57
Oxygen vs cladding, nuclear fuel, 19
Steam 400-450 C vs, 222
Stress cracking 25 Ni maraging steel, sea water, 95
Tungsten-magnesium, stress corrosion tests, calculations, 173

AMMONIA
Alpha brass vs, 125
Copper alloys, stress corrosion cracking tests, vs, 163
Copper-30Zn, vs, 143

Anion, HS^-, influence on sulfide films, 350
", influence on corrosion alpha brass, 125
Annealing, effect on 304 vs CO_2, 1100-1400 F, 84

ANODIC
Dissolution, mechanism kinetics, 15.
Polarization, behavior of NiCr in sulfuric acid, 277
" curves Fe vs 1N sulfuric acid, 379
" electrode mounting for studies, 275
" Nb in 5% sodium hydroxide, 132

Anodizing, titanium alloys vs hot chloride, 307
Atmosphere, industrial vs stressed maraging steels, 95
Atmospheric environments vs yttrium at 700 C, 268
Atomic reactors, simulated BWR, 250-500 C vs carbon steel, 260

B

Becquerel effect on copper corrosion, 207
Boilers, water, internal corrosion factors, 370
Blisters, aluminum in steam 400-450 C, 222
", hydrogen vs iron in H_2S-CO_2-H_2O, 245
Boron, oxide vs Inconel 202, M-252, Udimet 500, J-41, J-1570 (1038-1110 C), 196
Brass, alpha, vs ammoniacal and non-ammoniacal solution, 125
", stress corrosion in ammoniacal and non-ammoniacal solution, 125

B-Continued

Brazing alloys vs cesium 400 C, 341
Brines, sulfide vs iron, 69
Brittle fracture, SAE 4340 steel, 28

C

Calculations and statistics, mathematical treatment of internal oxidation of alloys, 382
", stress corrosion cracking endurance tests, 173
Carbide precipitation, 201 stainless steel in hot nitric acid, 332
Carbon dioxide vs iron, with H_2S, H_2O, 48
"", vs 304 at 1100-1800 F, 84
" replica techniques on surface films, 143
Carburization 304 at 1100-1800 F in CO_2, 84
Carpenter 20 Cb vs sulfuric acid, 254
Cathodic polarization vs intergranular attack on 314 stainless steel, 242
" protection, influence vs stress cracking, maraging steels, 95
" ", SAE 4340 steel, 28
Cerium ions with nitric acid vs 314 stainless steel, 235
Cesium vs materials for ion engines, 400 C, 341
Charging time, effect hydrogen embrittlement 310, austenitic, 53
Chloride ion, influence on pitting, 15
" ", " sulfuric acid vs Carpenter 20 Cb, 258
" vs boilers, steam, 370
" vs titanium alloys, 316-427 C, 307
Chromate ions with nitric acid vs 314 stainless steel, 235
Chromium vs boilers, 370
Classification, systems of gas metal reactions, 76

COBALT AND ALLOYS
J-1570 vs B_2O_3 (1038-1110 C), 196
M-252 vs B_2O_3 (1038-1110 C), 196
Udimet 500 vs B_2O_3 (1038-1110 C), 196
Oxygen vs CoAl, 500-1300 C, 316

COLD WORKING
Effect on 302 austenitic vs hot $MgCl_2$, 327
Effect on 304 vs CO_2, 1100-1400 F, 84
Influence cracking maraging steel, 95

COLUMBIUM AND ALLOYS
Alkalis, carbonates, phosphates, Sulfides up to 98 C vs, 132
Stabilization 20 Carpenter stainless steel, 254
Zirconium vs oxygen, high temperature, 382

Continuous scanning transformation (CST) Diagram, 379

COPPER AND ALLOYS
Be vs oxygen, high temperature, 382
Binary, stress corrosion cracking, 143
Bronze, vs cesium 400 C, 341
In Carbon steel vs sulfuric acid, 9
Cesium vs, 400 C, 341
Films, effect of light on, 207
Influence in zirconium in steam, 540-650 C, 113
Salts, influence on stress cracking alpha brass, 125
Stress corrosion cracking tests, 161
Ternary, stress corrosion cracking, 143
Zinc aluminum vs oxygen, high temperature, 382

Cracking rate, 302 stressed in 154 C, $MgCl_2$, 327
Crack propagation in fcc alloys, 158
Cracks, zirconium in 650 C steam, 113
Crevice corrosion, mechanism of, 209

C-Continued

CRYSTALS
Aluminum oxide in steam 400-450 C, 222
Iron filaments, dissolution kinetics, 39
Structure, classification gas-metal reactors, 76

D

Diagrams, anodic passivation, 379
Differential aeration cells, inhibitors vs on mild steel, 179
" ", mechanism vs crevice corrosion, 209
Dislocation structures, 304, 309 stainless steel, 288
" grain, influence on slip plane attack, 143

E

ELECTROCHEMICAL EFFECTS
Copper vs carbon steel in sulfuric acid, 9
Core and strain energy affect on stress corrosion, 158
Crevice corrosion, 209
Current density on pipelines, 28
Property of solid solution alloys vs stress corrosion cracking, 161

Electrochemical equilibria vs iron in 1N sulfuric acid, 3
Electrochemical equilibria vs iron in 1N sulfuric acid, 379
" mechanism, TcO_4^- on stress, 211
" reaction, intergranular corrosion of 314 stainless steel, 242
" reactions, crack propagation mechanism, 288
Electrode mounting for polarization studies, 275
" potential, TcO_4^- effect on, 211
Electronic conductivity, zirconium corrosion films, 113
Electron diffraction, aluminum oxide patterns, 400-450 C steam, 222
" microscope, aluminum platelets in steam 400-450 C, 222
" microscope, technique, stress corrosion cracking fcc alloys, 143
Embrittlement, niobium in sodium hydroxide, 132

F

Fabrication effects, errors in results due to, 194
Fcc alloys, stress corrosion cracking, 143
Filaments, iron, dissolution kinetics, 39

FILMS
Aluminum in steam 400-450 C, 222
Analysis of niobium, tantalum exposed to sodium hydroxide, 132
Carbon steel in deionized water, 250-500 C, 260
Chaston theory vs brass corrosion, 125
Fluoride on yttrium vs hydrofluoric acid, 268
H_2S-CO_2-H_2O in iron, 245
H_2S, protectiveness on iron, 350
Oxygen on thorium stabilized nickel, 600-1000 C, 295
Semiconductor, effect of light on, 207
Sulfide formation on iron, 245
Zirconium, conductivity of, 113
" corrosion morphology mechanism, 113

Foils, stressed for stress cracking tests, 143
" used in stress corrosion cracking tests, 288

G

Gas metal compounds, free energy classification of, 76
" " reaction fundamentals, 76
Geometric mean, as representative stress corrosion cracking endurance value, 176
Grain direction, titanium alloys, vs hot chlorides, 307
" size, effect on carbide precipitation in 201 stainless steel in nitric acid, 332
" ", effect on stress cracking rate, 95

H

Hastelloy C, pitting kinetics, 15
" X, vs steam 621-656 C, 355
Haynes 25, vs cesium 400 C, 341
Heat transfer, influence on deionized water vs carbon steel, 260

HEAT TREATMENT
embrittlement of niobium vs, 132

HEAT TREATMENT
Embrittlement of niobium vs, 132
Grain size 201, 332
Stainless steel 302, 316 austenitic wire, influence vs stress corrosion cracking, 188
Stress cracking maraging steel, 95
Titanium alloys, vs hot chlorides, 307
Zirconium on 540-650 C steam, 113

High rate, low rate phenomenon, stainless steel vs sulfuric acid, 254
Hot working, influence on zirconium in steam, 113
Hydrocarbon, vs NiCr 600 in 316 C water, 1

HYDROGEN
Absorption in zirconium vs steam 540-650 C, 113
Charging rate effect on cracking of SAE 4340 steel, 28
Embrittlement, austenitic 310, 53
" of cathodic protection maraging steels in sea water, 95
", tantalum-tungsten vs hydrofluoric acid, 337
Evolution on yttrium vs hydrofluoric acid, nitric acid, 268
Formed on iron by H_2S-CO_2-H_2O, 245
Measurement of entry rates in steel, 28
Penetration 8640 steel, 48
SAE 4340 steel, vs, 28
Uptake by zirconium in 500 C steam, 137

HYDROGEN SULFIDE
In brines, polarization of iron, 69
Films on iron, influence of, 48
Films on iron, protectiveness of, 350
Iron with carbon dioxide, water, vs, 48
Iron vs, 245

I

Inco 270 vs 600-1000 C, 295
Incoloy 800, vs steam 621-656 C, 355
Incoloy 825, vs steam 621-656 C, 355
Inconel, vs carbon dioxide, 1100-1400 F, 84
", vs cesium, 400 C, 341
" 600, vs steam 621-656 C, 355
" 625, vs steam, 621-656 C, 355
" 702, vs B_2O_3 (1049-1110 C), 196
Incubation period, pre- stressed corrosion cracking austenitic 302, 316, in MgCl, 188
Inhibition, pertechnetate ion, mechanism, 211
Inhibitors, vs differential aeration attack on steel, 179
" sodium phosphate glass vs differential aeration cells, 179
Intensiostatic tests of stress corrosion endurance, 173

T.P.
3

I-Continued

Intergranular attack, 304 stainless steel vs HNO_3-Cr^{+6}, 235
" corrosion of alpha brass, 125
" " nonsensitized stainless steel, activators of nitric acid, 235
Intermetallic layers formed in titanium-nickel mass transfer in mercury, 57
Ion engines, cesium tested vs materials, 341
Ionization constants, H_2S vs iron, 252

IRON AND ALLOYS
Chromium alloys, vs CO_2, 1000 F, 84
Chromium oxides vs CO_2, high temperature, 84
H_2S-CO_2-H_2O, 245
" " " system, 48
" " ", sulfide films on, 350
Influence in zirconium on steam 540-650 C, 113
Ion, concentration vs whisker dissolution rate, 39
Nickel chromium alloys in sulfuric acid, 277
Oxygen vs FeAl, 500-1300 C, 316
Polarization in H_2S-NaHS, 69
Steel composition, structures influence in boiler corrosion, 370

K

Kansite, influence on iron sulfide films, 350

KINETICS
Dissolution, iron whiskers, 39
Dissolution, pitting mechanism, 15
Gas-metal reactors, 76
Internal oxidation of alloys, 382

L

Lead vs NiCr 600 in 316 C water, 1
Line pipe steel, high strength, H_2 vs, 28
Lucalox vs cesium, 400 C, 341

M

Macrocracks, initiation by microcracks, 143

MAGNESIUM CHLORIDE
Stainless steel vs 18-10 austenitic, 143
" " vs 302, 154 C, 327
" " vs 302, 316 austenitic wires, stressed at 154 C, 188
" ", 304, vs deionized water, 288

Magnesium, effect mass transfer titanium, nickel in 538 C mercury, 57
Magnetite, in boilers, 370
Manganese ions, with nitric acid vs 314 stainless steel, 235
Maraging steels, 18, 20, 25, nickel vs marine, industrial environment, 95
Mass transfer, aluminum in nuclear deionized water, 19

MECHANISM
Alpha brass, intergranular corrosion, 125
B_2O_3 (1110 C) vs Ni and Co based alloys, 196
Carburization 304 at 1100-1800 F, 84
Crack propagation in 304 stainless steel, 288
Crevice corrosion, 209
Gas metal reactions, high temperature, 76
H_2S-CO_2-H_2O vs iron, 245
Intergranular attack on nonsensitized 314 stainless steel, 235
Internal oxidation of alloys, 382
Iron filaments in sulfuric acid, 39
Mass transfer aluminum in hot water, 19
TcO_4^- function as inhibitor, 211
Transgranular and intergranular cracking of fcc alloys, 143
Transgranular stress corrosion cracking, solid solution alloys, 161

M-Continued

Mercury, 454 C vs titanium, nickel, 57
Microcracks in fcc alloys, 143
Microhardness tests on zirconium corroded in steam, 113
Microstructures of alloys vs oxygen, high temperature, 382
Microtopology of gas-metal reaction surfaces, 76
Molybdenum vs cesium, 400 C, 341
Molybdenum in titanium, vs hot chlorides, 307

N

NICKEL AND ALLOYS
AMS 4777 vs cesium, 400 C, 341
Inconel 702 vs B_2O_3 (1049-1110 C), 196
J-41 vs B_2O_3 (1038-1110 C), 196
M-252 vs B_2O_3 (1110 C), 196
TD, vs 600-1000 C, 295
Aluminum vs U_3 500-1300 C, 316
Cesium vs, 400 C, 341
Chromium Aluminum vs O_2, 500-1300 C, 316
" 600 vs pressurized hot water, 1
" vs oxygen, high temperature, 382
" plated vs CO_2 750-950 C, 84
" vs sulfuric acid, 277
Influence in zirconium in steam, 540-650 C, 113
Maraging 18, 20, 25 percent nickel vs marine, industrial environments, 95
Mass transfer in 454 C mercury, 57
Oxygen vs 500-1300 C, 316
Steam vs, 621-656 C, 355
Sulfuric acid vs, 277
Thorium stabilized vs oxygen at 600-1000 C, 295
Udimet 500 vs B_2O_3 (1038-1110 C), 196

Niobium - See Columbium
Nitrogen, importance of level in fcc alloys transgranular cracking, 158

NUCLEAR REACTORS
Aluminum fuel cladding, O_2 vs, 19
Fuel, aluminum clad, vs deionized water, 19
Stainless steels, nickel alloys vs 621-656 C steam, 355
Zirconium in 540-650 C steam, 113

O

Oxidation, 304 at 1100-1800 F in CO_2, 84

OXIDES
Aluminum in steam 400-450 C, 222
Metals, properties, 76
Platelets, aluminum in steam, 400-450 C, 222
Steam vs, 621-656 C, stainless steel - nickel alloys, 355

Oxidizing amines, function in inhibition, 220

OXYGEN
Aluminum nuclear fuel cladding vs, 19
Boilers vs, 370
Cesium vs ion engine materials, 341
Embrittlement zirconium in steam, 113
Evolution in NiCr alloys vs sulfuric acid, 277
Influence on crevice corrosion, 209
Influence in deionized water, 250-500 C, 260
Internal of AgIn, CuBe, NiCr, NbZr, CuZnAl alloys, role of, 382
Iron, nickel, copper-base alloys, 500-1300 C vs, 316
NiCr 600 in 316 C water, effect of, 1
Nickel, thorium stabilized 600-1000 C, 295

P

Passivability, stainless steel technique for studying, 254

P-Continued

PASSIVATORS
Sodium benzoate vs differential aeration cells, 179
" citrate vs differential aeration cells, 179
" molybdate vs differential aeration cells, 179
" nitrite vs differential aeration cells, 179
TcO_4^- on iron, 211
Zinc sulfate vs differential aeration cells, 179

Passivity, anodic, iron in sulfide brines, 69
Pearlite, influence on hydrogen penetration, 48
Pertechnetate ion, inhibitive properties, 211
" ", separation and purification process, 211

pH
Effect on sulfide films on iron, 350
H_2S-CO_2-H_2O vs iron, 253
Influence on crevice corrosion, 209

Phosphate hideout in boilers, 370

PITTING
Aluminum in steam 400-450 C, 222
At dislocations of grains, 143
Mechanism, 15
Rates of maraging steels, marine, and industrial environment, 95
Stainless steel 304 vs deionized water, 288

Platelets, aluminum oxide in steam 400-450 C, 222
Platinum, iridium, vs cesium 400 C, 341

POLARIZATION
Anodic/cathodic steel in sulfuric acid, 9
Anodic curve, iron whiskers in 1N sulfuric acid, 39
Curves, technique influence, 254
Iron in H_2S-NaHS buffers, 69
Iron whiskers, 39
Test equipment, 277

Potassium chromate, inhibition compared to TcO_4^-, 211
" hydroxide, vs niobium at 98 C, 132
" dichromate, inhibition compared to TcO_4^-
Potentiostatic polarization, electrode mounting technique, 275
" " data on iron in sulfide brines, 69
" tests on copper alloys, 164
" tests of stress corrosion endurance, 173
Pressure high, vs aluminum in steam 400-450 C, 222
Pressure high, water vs NiCr 600, 316 C, 1

Q

Quick startup, influence on rate vs carbon steel, BWR, 260

R

Radiation, iron oxide, effect on, 19

RATE
Corrosion, martensite, influence on iron, 48
H_2S-CO_2-H_2O vision, 245
Laws, for classification gas-metal reactors, 76

S

Sapphire, synthetic, vs cesium, 400 C, 341
Sensitization, 201, control grain size, 332
Scale, influence on internal oxidation of alloys, 382
Silver alloys, stress corrosion cracking tests, 161
Silver-indium vs oxygen, high temperature, 382

S-Continued

SODIUM
Bicarbonate, vs differential aeration cells, 179
Chloride, inhibition by pertechnetate ion, 211
" vs stainless steel 304, deionized water, 288
Fluoride, vs nickel chromium 600 in 316 C water, 1
Hydroxide, concentration in boilers, 370
" vs Nb up to 98 C, 132
" vs tantalum up to 98 C, 132
Nitrite, inhibition compared to TcO_4^-, 211
Sulfate, inhibition by pertechnetate ion, 211
Sulfide, vs niobium at 98 C, 132

Solid solution alloys, mechanism transgranular cracking, 161
Solids, suspended, influence on boilers, 370
Solute segregation, influence on stress corrosion, 157
Specimens, preparation for bent-beam stress tests, 105
Stacking fault, influence on corrosion, 143
" ", influence on transgranular stress corrosion cracking, 161

STEAM
Aluminum vs, 400-450 C, 222
Saturated vs carbon steel, 260
Stainless steel and nickel alloys vs, 621-656 C, 355
Superheated, vs zirconium alloys, 113
Zirconium vs at 500 C, 137

STEEL
AM 350 vs cesium, 400 C, 341
SAE 4340, cathodic protection of, 28
AISI 4340, stress cracking, 95
8640 vs H_2S-CO_2-H_2O, 48
Carbon, vs sulfuric acid 42 percent, 9
Carbon vs water, superheated (285-500 C), 260
Mild, inhibitors vs differential aeration cells, 179

STEEL STAINLESS
17-4 PH vs cesium 400 C, 341
17-7 PH vs cesium 400 C, 341
18-10 austenitic, stress corrosion cracking, 143
20Cr20Ni austenitic, ultra pure vs stress corrosion cracking, 161
20Cr25Ni, cobalt stabilized vs CO_2 1100-1400 F, 84
20Cb vs sulfuric acid, 254
20Cb-3 vs sulfuric acid, 254
201; grain size vs carbide precipitation, hot nitric acid, 332
302, 316 austenitic wires vs magnesium chloride, 188
302 vs cesium 400 C, 341
302 vs 154 C, $MgCl_2$, 10-30,000 psi, 327
304 austenitic, non-sensitized, intergranular attack, 235
304 vs CO_2 at 1100-1800 F, 84
304, 304L, cracking, 288
304 vs steam 621-656 C, 355
310, austenitic, embrittlement, 53
316L, vs cesium 400 C, 341
347 vs cesium 400 C, 341
406 vs CO_2 1100-1400 F, 84
406 vs steam 621-656 C, 355
416 vs cesium 400 C, 341
Austenitic, pitting kinetics, 15
Sicromo 2 1/2 vs cesium 400 C, 341
Steam vs 621-656 C, 355
Stress corrosion cracking, initial stages, 288

Strain rate, effect, hydrogen embrittlement 310 austenitic, 53
" vs steam boiler rates, 370
Strauss test, 304 stainless steel, vs nitric acid, 235

STRESS CORROSION
Cracking vs alpha brass, 125
" of fcc alloys, 143
" NiCr 600 in pressurized, hot water, 1
" stainless steel 302, 316 austenitic wires, 188

S-Continued

Maraging 18, 20, 25 Ni steels in marine, industrial environment, 95
Steel 25 Ni maraging steel, sea water, 95
Steel 302, in 154 C $MgCl_2$ 10-30,000 psi, 327
Steel, stainless 304, 304L austenitic, 288
Steel SAE 4340, 28
Titanium alloys, cracking vs chlorides at 316-427 C, 307
Transgranular cracking, solid solution alloys, 161

STRESS
Function in H_2 cracking steel, 28
High, 10,000-30,000 vs 302, 154 C, $MgCl_2$, 327
Influence 5 and 10 M psi vs 302, 316 in MgCl, 154 C, 188
Stainless steel 314 vs in nitric acid + Cr^{+6}, 235
Structure influence on stress corrosion cracking, solid solution alloys, 161
" martensitic, influence on corrosion rate, 48
Sulfur, influence on ion engine performance, 341
" dioxide vs copper alloys, 143

SURFACE
Exit, condition influence H_2 penetration, 48
Metal, gas reactions at high temperature, 76
Steel, influence on sulfuric acid, 9

T

TAFEL SLOPES
Iron in sulfide brines, 69
Iron in 1N sulfuric acid, 39
Nickel, NiCr alloys in sulfuric acid, 277

TANTALUM AND ALLOYS
Alkalies, carbonates, phosphates, sulfates vs up to 98 C, 132
Cesium vs 400 C, 341
Hafnium vs tantalum-tungsten, 337

Temperature, general, effect on hydrogen embrittlement, 53

TEMPERATURE HIGH
Alloys vs, internal oxidation from, 382

T-Continued

Boron oxide vs Ni-Cr-Cr alloys (1038-1110 C), 196
Carbon steel vs in deionized water, 260
Cesium, 400 C vs ion engine rate, 341
Gas-metal, fundamental reactions at, 76
Ni alloys, ThO_2 stabilized vs 600-1000 C, 295
" Cr 600 vs 316 C water, 1
", Ti vs 454 C mercury, 57
Oxygen 500-1300 C vs Fe, Ni, Co alloys, 316
Stainless steel 201, sensitization > 1400 F, 332
" " " vs 154 C $MgCl_2$, 327
" " 304 vs CO_2 at 1100-1800 F, 84
" " and Ni alloys vs, 621-656 C steam, 355
Steam 400-450 C vs aluminum, 222
Steam 500 C vs zirconium, 137
Titanium vs chlorides 316-427 C, 307
Titanium, nickel vs 454 C mercury, 57
Water, deionized vs aluminum, 19

TESTING LABORATORY METHODS
Alpha brass, vs ammonia and other solutions, 125
Boiling water reactor vs carbon steel, 260
Boron oxide (1038-1110 C) vs Ni-Cr-Co alloys, 196
Calculations, bent-beam test specimens, 105
Carpenter 20Cb vs sulfuric acid, 254
Criteria for bent-beam test specimens, 105
Cesium, 400 C vs ion engine rates, 341
Hydrogen embrittlement 310 austenitic, 53
Iron-aluminum, FeCrAl, NiAl and CoAl vs O_2, 500-1300 C, 316
Maraging Ni alloys vs marine, industrial environments, 95
Neutral sulfide brines vs Fe, 69
Nickel alloys vs steam 621-656 C, 355
" " vs sulfuric acid, 277
" Cr 600 vs 316 C water, 1
", Ti in 538 C mercury, 57
Niobium vs alkaline media, 132

T-Continued

Stainless steel austenitic, stress corrosion cracking, 288
" " 201 vs hot nitric acid, grain size vs carbide precipitation, 332
" " 302 vs $MgCl_2$, 154 C, 327
" " 304 at 1100-1400 F in CO_2, 84
